

Reference quote

We have been working closely with PKS for many years and are enthusiastic users of their analysis tool, **eXplain**. What we particularly appreciate about the PKS team is their combination of technical depth and pragmatic advice.

The **DevOps workshop** with Stephan Urban and Richard Wolcke was the next logical step for us in further modernizing our IBM i development. It was particularly helpful that PKS assessed our specific starting point and demonstrated in a practical way how **VS Code, Git/GitLab**, and – in the future – **automated deployment processes** can work together effectively.

Special topics such as **precompilers, compiler options**, and various entry-level scenarios – with or, initially, without Git – were also thoroughly addressed. This gives us a solid foundation to further develop our development processes step by step while simultaneously bringing more transparency to our legacy code with eXplain.

And we know that PKS will continue to stand by our side as a flexible partner in the future whenever we have questions or encounter obstacles. For any company on the path to modernization, a partnership with PKS is simply a “perfect match.”
